PROFESSIONAL SUMMARY

Full Stack Software Developer with a strong foundation in building scalable web applications and AI-driven platforms. Experienced in architecting robust systems using modern frameworks (Next.js, React, Django) and engineering local LLM orchestration, RAG architectures, and hardware-optimized workflows. Proven track record of developing production-ready applications supporting 500+ users, alongside extensive technical leadership experience collaborating with cross-functional teams of 30+ to drive software engineering initiatives, developer education, and technical operations.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Pranveer Singh Institute of Technology | Kanpur, Uttar Pradesh, India

07/2024 - 07/2028 | CGPA: 8.5

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, Java

Frameworks & Libraries: Next.js, React, Vue.js, Django, Tailwind CSS, PyTorch, Pydantic

Databases & AI Tools: Supabase, MySQL, ChromaDB, Ollama, Local LLMs (Llama 3), RAG Architectures

DevOps & Architecture: Docker, Git, GitHub, BitBucket, REST APIs, System Design Fundamentals

EXPERIENCE / LEADERSHIP

Web Wink | 01/2025 - 05/2026

Full Stack Web Developer

- Developed and maintained enterprise web platforms utilizing modern frontend and backend technologies, driving feature implementation and enhancing overall functionality and user experience.
- Optimized application performance and streamlined deployment pipelines across the complete software development lifecycle, ensuring high reliability in production environments.

Kanpur AI Space & UPAI | 09/2025 - Present

Community Developer & Core Team Member

- Spearheaded technical community growth to 250+ active members by organizing developer meetups, workshops, and ecosystem-building programs.
- Architected and deployed production-grade internal platforms (RSVP and CertVerify) using Next.js and Supabase for real-time data synchronization, streamlining operations.

CodeDay | 09/2022 - 04/2026

Regional Manager

- Collaborated with cross-functional teams of 30+ individuals to scale technology events, hackathons, and developer programs across multiple university campuses including IIT Delhi and Chandigarh University.

Microsoft | 01/2023 - 01/2026

Microsoft Learn Student Ambassador

- Selected for the MLSA Beta Program, facilitated developer education by organizing technical workshops focused on cloud architectures and modern software development tooling.

PROJECTS

Nexus OS

- Architected an AI-driven multi-agent orchestration platform in Python to automate software development workflows using local quantized LLMs (Llama 3) via the Ollama inference engine.
- Engineered a hybrid semantic search (BM25 + Vector) Retrieval-Augmented Generation (RAG) system utilizing ChromaDB to feed agents highly accurate codebase context.

- Implemented strict data validation using Pydantic schemas for deterministic inter-agent communication in JSON, effectively preventing hallucination loops.
- Managed dynamic hot-swapping of LoRA adapters in VRAM via PyTorch and utilized Docker to provide a secure, sandboxed environment for testing and executing AI-generated code.

RSVP (Event Management Platform)

- Built a comprehensive full-stack event management dashboard using Next.js and Supabase, successfully managing 5+ major events and supporting 500+ active users.
- Engineered real-time data synchronization and implemented automated email communication campaigns utilizing SMTP.
- Developed QR-based attendee verification, RSVP tracking, and payment integrations, significantly reducing manual administrative workflows for the Kanpur AI Space team.

CertVerify

- Developed an automated credential management system using Next.js, Vue.js, and Supabase to generate, distribute, and verify digital certificates.
- Streamlined secure validation workflows, enabling participants and organizations to authenticate event credentials efficiently.

Rail Sanchalak (Smart India Hackathon 2025)

- Designed a role-based railway operations platform to digitize coordination workflows for Station Masters, Track Managers, and Section Controllers.
- Architected backend process models and automation features to optimize task management and reduce manual operational overhead.

CERTIFICATIONS

- Microsoft Learn Student Ambassador (Beta Program)

ADDITIONAL INFORMATION

- **Core Competencies:** Software Architecture, Full Stack Development, AI Systems Engineering, Technical Documentation, Developer Relations.
- **Technical Speaking:** Hosted 25+ technical events, hackathons, and software development workshops.
